

HeatSeeker Horizontal Pool Heat Pump

- Remote digital control panel
- Titanium heat exchanger
- Ecological heating method
- High efficiency compressor
- Self diagnostic
- Fully programmable
- Compact design
- Outdoor Installation
- Quick and easy installation
- Strong steel casing
- Very quiet operation
- Reverse cycle defrost

As fuel prices increase, it is important that you choose the most cost effective and energy efficient method of heating your swimming pool.

The HeatSeeker Swimming Pool Heat Pump is suitable for heating either chlorine or salt water above ground or in-ground pools that hold from a few thousand gallons up to around 15,500 gals (70,000 litres) of water. (This recommendation assumes that your desired pool temperature is 29degreesC, the ambient air temperature is not less than 15degreesC & a heat retention cover is also used)

Model	Pool Volume
5.6kW	15,000 Ltrs / 3,300 Imperial Gallons
9.5kW	30,000 Ltrs / 6,600 Imperial Gallons
12.5kW	40,000 Ltrs / 8,800 Imperial Gallons
17kW	55,000 Ltrs / 12,100 Imperial Gallons
21kW	70,000 Ltrs / 15,400 Imperial Gallons

Heat Pumps work by absorbing heat from the outside air, this heat is then compressed and transferred to your pool water.

The efficiency of Heat Pumps is measured by a "coefficient of performance" (C.O.P.). The HeatSeeker range of Swimming Heat Pumps produce a C.O.P. in excess of 5; in other words, for every 1Kw of electricity consumed, the HeatSeeker will generate 5Kw of heat for your pool water, remarkable when you consider that the most efficient electric and gas heaters produce less than 1Kw of heating for every 1Kw consumed.

HeatSeeker Swimming Pool Heat Pumps are manufactured by one of the worlds largest Heat Pump companies who have built up a proven and reliable installation record worldwide for more than 15 years now.

Thanks to their unique fan and compressor design, (Japanese engineered, the most reliable on the market) Heatseeker Heat Pumps enjoy Whisper Quiet operation. Their Programmable Digital Control allows precise control of pool temperature, this Digital Controller can be installed remotely to enable convenient finger tip operation.

With their rugged design, Heatseeker Heat Pumps are suitable for outdoor installations and are supplied complete with standard Push-fit connections for 1.5 inch swimming pool ABS pipe work(certain adapters are also available from us for other fitments/sizes, please call 0845 680 0854 if unsure).

The capital outlay of purchasing a Heat Pump has, in the past, been higher than other methods of heating swimming pool water. As Heat Pump technology has gained in popularity the cost of the equipment has reduced. It is now possible to buy a quality swimming pool Heat Pump at an affordable price.

Being extremely simple to install and available at a very attractive price, Heatseeker Heat Pumps are a very popular choice of heating for domestic pool owners here in the United Kingdom. Typically, in our seasonal conditions, these Heat Pumps perform most efficiently between the months of May through to September.

Heatseeker Swimming Pool Heat Pumps are supplied with an additional extended parts only warranty, consisting of 2 years on the compressor and 5 years on the Heat exchanger.
